INTRODUCTION

The International Nuclear Information System (INIS)

INIS is a cooperative, decentralized information system set up by the International Atomic Energy Agency and its Member States. Its purpose is to construct a data base identifying publications relating to nuclear science and its peaceful applications. Member States and cooperating international organizations scan the scientific and technical literature published within their boundaries or by them, select from it those items which fall within the subject scope of INIS¹⁾ and process the data according to the agreed standards and rules. Document descriptions, abstracts and, in certain cases, full texts of the literature are then submitted to the IAEA Headquarters, where those data are merged and the INIS output products compiled. The following services are issued:

- The INIS magnetic tape service
- INIS Atomindex: a semi-monthly abstracting journal²⁾
- INIS non-conventional literature on microfiche³⁾

Availability and price of INIS services

MAGNETIC TAPE SERVICE

This semi-monthly service, providing magnetic tapes containing all records submitted to the system, is available only to participating Member States and International Organizations. National INIS centres in many countries are utilizing INIS tapes in the provision of national information services. Available services vary from country to country and interested persons are requested to contact their national INIS Liaison Officer whose name and address appear in the list beginning on page XI.

INIS Atomindex

Available to the public on annual subscription. Prices for 1980 are:

- (a) Yearly subscription including Cumulative Indexes (by surface mail)
Austrian Schillings 3100,—
additional rate for airmail not including Cumulative Indexes (from Vienna):
Austrian Schillings 2200,—
- (b) Yearly subscription: Issues Nos. 1-24 only (by surface mail)
Austrian Schillings 2200,—
additional rate for airmail (from Vienna):
Austrian Schillings 2200,—
- (c) Yearly subscription: Cumulative Indexes only (by surface mail)
Austrian Schillings 900,—
additional rate for airmail (from Vienna): at actual costs
- (d) Price per single issue of Nos. 1-24
Austrian Schillings 100,—

¹⁾ The scope of INIS is defined by the scope of the IAEA's interests. Full details of the INIS scope are printed in IAEA-INIS-3, INIS: Subject Categories and Scope Descriptions. This is a publication in the INIS Reference Series which defines the standards and rules for INIS. Copies of all documents in the INIS Reference Series are available from the IAEA, Vienna.

²⁾ INIS Atomindex is prepared from the semi-monthly INIS magnetic tapes by computer-driven photocopying methods. The bulk of the information contained in the magnetic tapes is printed in INIS Atomindex. The major exception to this are the subject descriptors, whose main use is for computer-searching. These are omitted from all INIS Atomindex entries that are accompanied by abstracts.

³⁾ In INIS, "non-conventional literature" is defined as all literature other than journal articles or commercially published books.

Personal Author Index

The name of each personal author of every document cited is listed in the form in which it appears in the main entry. Hence, an author's name may appear more than once, depending on whether a forename is spelled out or only initials are given. Note also that names preceded by "name fragments", such as "de", "van", "von", etc., may appear either under the name fragment or under the main part of the name, depending on local practices for treating such names.

Each entry gives the full title of the document and the RN of the main entry for that document. If the document is a technical report or patent document, the report number or patent number is given in brackets, following the title.

Corporate Entry Index

The names of corporate entries are listed in the form specified in INIS: Authority List for Corporate Entries and Report Number Prefixes (IAEA-INIS-6). Whenever appropriate, references are made from superseded forms of the corporate names, or from forms that have not been adopted, to the forms of the names used in this index. Note, however, that index entries are not included for corporate bodies cited only as an author's affiliation.

Each entry gives the full title of the document for which the corporate body is responsible, and the RN for the main entry of that document. If the document is a technical report or patent document the report number or patent document number is given in brackets, following the title.

- Golden, CO, USA. 76 Mar 2.** Interagency Mechanical Operations Group meeting. 283257, 284029.

Report, Standard and Patent Number Index

Entries for publications are arranged according to the number assigned to them by the organizations or institutions responsible for their production or distribution. If a document has not been assigned a reference number at the source, it is assigned an INIS-mf – number by the INIS Secretariat. Patent numbers are listed under the general heading PATENTS.

Each index entry gives the RN for the main entry of the document and a note indicating its availability. If this note consists of, or contains the acronym "INIS", a microfiche copy of the document is available from the INIS Clearinghouse. Otherwise a source from which a copy of the document may be obtained is given. On occasion, the availability of the document in another form is also indicated. See also the section headed "How to obtain copies of documents cited in INIS Atomindex", below.

Subject Index

Each document listed in **INIS Atomindex** is entered under one or more alphabetically listed subject headings. These are constructed from descriptors selected from among those assigned to the magnetic-tape record for the document, and usually consist of a pair of descriptors, one used as a main heading and the second as a qualifier of that main heading. The main headings are selected to describe as specifically as possible an important concept in the document, and the qualifiers are selected to provide further information about the main heading. Occasionally, a document is so general or covers so many aspects of the concept represented by the main heading that the use of a qualifier is not appropriate. The full index entry includes, in addition to the title of the document, the one or more subject categories that have been assigned to the document (printed in brackets), and the RN of the main entry for the document. Additional information on the content of the document may be included within the brackets with the categories as an augmentation of the title.

The subject index also includes references from terms not adopted for indexing to the approved terms (descriptors) under which information may be found (see references); see also references are intended to guide the index user from one subject heading to another under which related material may also be indexed.

For additional guidance to subject headings under which references of interest might be found, see **INIS: Thesaurus (IAEA-INIS-13)**.

How to obtain copies of the documents cited in INIS Atomindex

Copies of the technical reports, conference preprints, patents, standards and theses (i.e. non-conventional literature) are normally available in microfiche format from the **INIS Clearinghouse**. For those items of non-conventional literature which are not available from the **INIS Clearinghouse**, both the main entry and the Report, Standard and Patent Number Index entry provide information regarding availability from another source or in another form.

Most of the conventional, commercially published literature abstracted in **INIS Atomindex**, including books and journal articles, may be found in major libraries around the world. For publications issued in particular countries, enquiries should be made to the organizations listed below. However, enquirers having difficulty in obtaining access to any of the literature cited in **INIS Atomindex** should seek the assistance of the national **INIS Liaison Officer** in their country (a list of the **Liaison Officers** is given beginning on page XI).

Most of the papers listed in INIS Atomindex are held at the British Library Lending Division in the United Kingdom. Photocopies of these are available at a reasonable charge in the UK via the BLLD Loan/Photocopy Service, and outside the UK via the BLLD Overseas Photocopy Service. Please write for further details of these services to:

United States of America

In the United States, the source of public availability of most US reports announced in INIS Atomindex is the National Technical Information Service (NTIS), US Department of Commerce, Springfield, Virginia 22161. Telephone: (703) 557-4650. Telex: 89-9405. Some reports are available from the Superintendent of Documents, US Government Printing Office, Washington D.C. 20402.

In INIS Atomindex, the specific source for each US report is given with the abstract entry, together with the NTIS price code. The following table is an explanation of the code. Section A is the standard code and provides a code A01 for the Standard microfiche price of \$3.00 per title (\$4.50 for non-North American purchases), and codes A02 through A24 plus A99 for prices of printed reports dependent upon the page count of the report. Section E is for documents which the sponsoring agency wants to price at a higher or lower price than that called for by the page count, as determined in Section A. These are coded as E01 through E20 plus E99. Note that the price for non-North American purchases of paper copies is double the price given in this table.
